1 Subject area:

The Artificial Intelligence '**AI**' in digital health based on Internet of Things '**IoT**' and cyber-pyhsical system.

2 Aim:

The goal is to create a new way to protect children from kidnapping based on AI techniques like using IOT technologies in monitoring.

3 Arguments:

The spread of kidnapping is widespread in the world.

4 Objectives:

* Preliminary ideas :
-Provide the basic tools "software + hardware " to start of implementation the project.
- Must be studied the physiological state of the human being.
- Must be read related paper of health system.
- Do a general search on health monitoring systems based on AI and IoT and extend the idea.
- Get started a work with do the planing.

Note: These are just initial thoughts.
